January/February 2010 **Environmental**

editorial closing date: 4/12/09

To ensure that the heating system is working at its peak performance it is essential to have the right controls. Likewise, pumps play an important role in the smooth running of the system. P&HE magazine looks at some of the energy efficient products available that will get the attention of the consumer.

P&HE features are supported by articles from leading experts and companies. They are presented in an unbiased and commercially neutral form, in keeping with the Institute's status as the UK's only professional body for the plumbing industry, and whose principal aim is the improvement of plumbing and heating engineering standards in the public interest. The Institute reserves the right to change this listing without prior notice.
